*“Healthcare employers **must comply** with the US Occupational Safety and Health Administration’s (OSHA’s) requirements to prevent occupational exposure to SARS-CoV-2, the virus that causes 2019 Coronavirus Disease (Covid-19). When surgical N95 respirators are necessary to protect employees, employers **must** implement a comprehensive respiratory protection program in accordance with the Federal OSHA’s Protection Standard (29 CFR 1910.134).” OSHA Requirements for Occupational Use of N95 Respirators in Healthcare, [OSHA Review](#), April 28, 2020*

About Us

Safety First Fit provides in-person onsite N95 fit testing services to comply with OSHA Respiratory Protection Standard Protocol 29 CFR 1910.134. We also offer training to develop in-house Fit Test Administrators for your site using OSHA protocols (Train the Trainer). We custom tailor our services to meet your community’s specific respiratory needs.

Safety First Fit provides the following service schedules:

Provide the required Respiratory Protection Program if one is not in place at your community.

Prescheduled on site fit testing clinics at your physical location using approved qualitative protocols which are required prior to employees wearing a N95 mask.

Procedures for proper use of respirators in routine and reasonably foreseeable emergency situations.

Provide demonstrations in respirator usage and OSHA required training so that your staff will understand the process of getting a tight seal between the respirator and the wearer's face to provide the intended protection.

Provide the login credentials for the OSHA mandated Medical Evaluation Questionnaire (MEQ) that is required prior to fit testing for ALL employees.

Provide post-test documentation that each employee has been properly fitted with the respirator that will be used per your community's requirements.

Train the Trainer participants will receive a training manual and a certificate to demonstrate that they have completed the course.
